**DETAILED ACTION**

***Remarks***

1. In view of amendment, the Examiner withdraws the objection to claim 16.

***Allowable Subject Matter***

2. Claims 16-32 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter: the record of prior art does not show an electromagnetic device with two relatively movable sets of teeth made of soft magnetic material being of a size enabling it to generate a maximum magnetic potential of about  $1.7 \times 10^{-4}$  J/ $\mu_0$  ampere turns (At) wherein the device is optimized to have the width E of air gap to meet the optimum range of working as described in claim 1. As known in prior art, the width of air gap should be as narrow as possible to generate maximum torque, the prior art motor of this type have the air gap significantly smaller than the air gap of the present invention (for example, US Patent 4,508,984 discloses a motor with a size approximately double the size of the present invention and has the air gap of 1mm). The working range of the present invention are critical and they produce unexpected result when it allows the motor works with large air gap to facilitate the manufacturing process.

***Conclusion***
